Transportables And Delivery Solutions

Mobile Solutions Growing with Your Business

INTRODUCTION

Transportables and Delivery Solutions (TADS) presents unique (patents pending) transportable systems that are used for loading, securing the load during transportation, unloading, supporting and securing any load on site. Most of our current systems are transported on tandem trailers allowing for cost efficient and easy transportation, manoeuvrability on site/location and are totally independent of any other lifting device. Conveniently, with TADS the load can be easily removed off the carrying vehicle/trailer by one person in a few minutes and with our standard frames and inbuilt security features including grinder protected key locked pins, (with the transporting vehicle removed) it leaves the load very secure on site. Each unit has its own hidden embedded identification serial number and with optional security features available (such as GPS tracking, micro-dotting, alarmed and real time CCTV surveillance) to assist greatly in prevention of theft and asset recovery and prosecution should the need arise.

TADS presents a world first unique transportable system that allows totally independent load management. TADS ensures that your load does not require any additional lifting equipment.

SITE AMENITIES SOLUTIONS

These unique systems provide a cost effective solution that is so easy to use that one person can have our standard system off the towing trailer/vehicle in a matter of minutes. Once on site, should the TADS unit require moving, it can be moved in the same manner. If this is not possible the TADS units have been designed and engineered to a state that allows easy access for fork lifts and engineered with lifting lugs for cranes, helicopters etc.

We believe it is the easiest, fastest & most versatile system in the world.

TADS amenities units can be tailored to any site needs offering a unique solution which can incorporate your site amenity requirements into a contained system that is easily transported and delivered to site helping you meet all your OH&S requirements.

MOBILE RAPID DEPLOYMENT MONITORING UNIT (MRDMU)

The MRDM unit offers a complete site security solution that is no longer out of financial or operational reach. With end users in mind our easy to use features and hardware have been designed to enable anyone to remotely monitor their site.

MOBILE RAPID DEPLOYMENT MONITORING UNIT (MRDMU)

TADS M.R.D.M Units have undergone 4 years of field testing & development to ensure we deliver one of the best, most cost effective, reliable and easy to use products on the market. Designed, developed and field tested in Australia for the harshest of environments for all industries. A versatile tool & the pride of our fleet of rapid deployment units, the MRDMU is constructed with Bondor industrial refrigeration material for internal climate control & sound insulation. Supported with our patents pending unique delivery systems that boasts helicopter lift points for zero footprint works, cyclone tie down points and the TADS trailer transport and delivery system, your unit is ready for rapid deployed and can be up and running in minutes leaving the site with a very strong security presence. The MRDMU will keep you up to date with all events as they happen and remote-in live view and review of footage at your finger tips.

TADS stock units have various internal layouts, alternatively, we specialise in custom fit outs helping to meet specific industry site OH&S and client requirements . With end users in mind our easy to use features and hardware include;

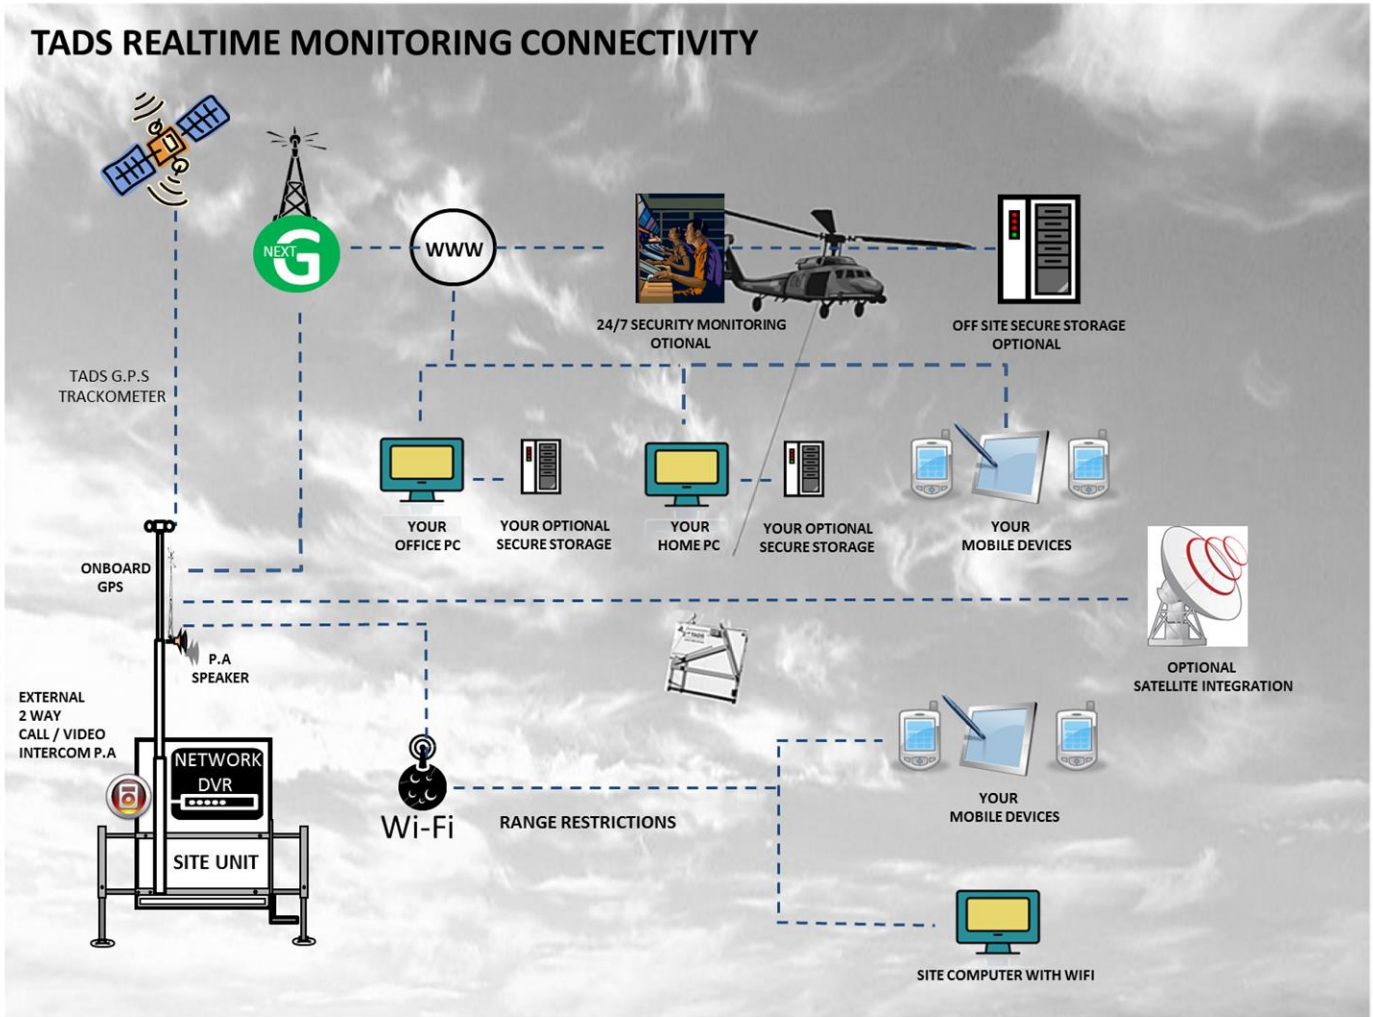

- Full 360 CCTV coverage
- 360 motion detection with wireless PIR & REED switch options for extended coverage and dead spots
- 6+ metre masts with various PTZ options with laser illumination for birds eye view with superior optical zooms
- Motion activated LED flood lighting
- Two way communications via external P.A load speaker
- GPS tracking & emergency response co-ordinates, external emergency push to call button with video intercom,
- Secure private networking with internet, Wi-Fi, phone lines
- Remote-in diagnostics and configurations
- Total solar powered 100% self sufficient units with satellite integration, auto and remote start generators
- Ancillary equipment options available upon request.

Transportables And Delivery Solutions

HOW IT WORKS

Motion Detection

- Intruder triggers motion detection

Site Illumination

- Instantly the super bright LED flood lighting illuminates the area returning cameras back to full colour and the alarm starts it's countdown (pre-allocated time to disarm)

Siren & Strobe

- Failure to disarm panel within allocated time triggers the siren and strobe light (can be set to silent). Instantly the panel starts dialling designated numbers and will ring in consecutive order until it is acknowledged.

Loud Speaker

- Optional playing of pre-recorded message through load speaker

Live Video

- Client or optional monitoring company logs on to view live stream video to visually confirm events and make informed response decisions with real time accurate information (remotely reset alarm). Communicate via load speaker to site for verbal warnings or issuing instructions

Live Video Scan

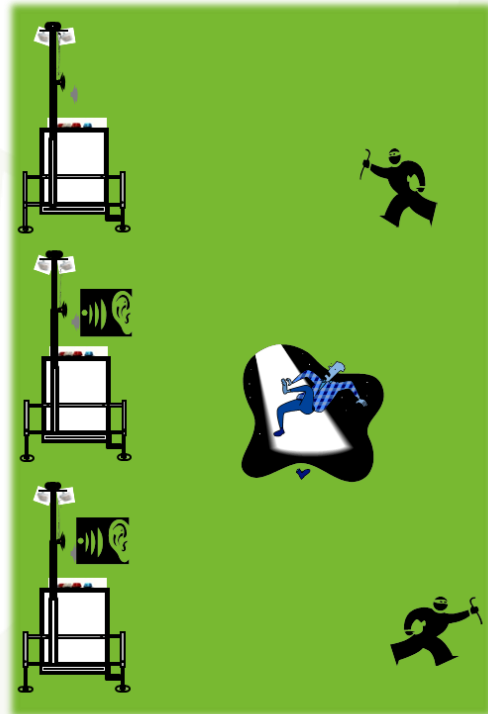

- The PTZ can be used for close-up inspections, scanning area for number plate image capture etc

Site Secure

- Intruder startled and with their presence known and stealth removed research shows they usually flee the seen

REAL TIME REMOTE VIEWING

Our system records 24/7 - 365 days a year without lunch or toilet breaks, never sick or tired and never misses a thing. All data is stored on the secure internal 2 TB network video recorder with the option of site secure storage. Footage can be remotely viewed at any time through our supplied software on multiple mobile devices and PC's. world wide within 3G, NEXT G coverage areas with standard internet access. Local Wi-Fi range dependant with optional satellite integration for very remote coverage.

TADS has combined its extensive military, security, construction, exploration, mining and emergency response experience with innovation to deliver a unique solution to workplace health and safety and amenity requirements on building, construction & remote working sites.

TADS has developed mobile rapid deployment units that can be tailored to any site requirement offering a unique solution which combines all of your site needs into a contained system that can be easily transported and delivered to site. These systems offer additional benefits of our optional fit outs such as CCTV and alarm with remote monitoring, control features with phone notification of events.

The TADS advantage frame and transport system can be applied to an infinite number of applications and can be custom designed to suit your specific needs.

Visit our web site to see some of the TADS custom build applications.

Call us to discuss your individual needs.

HIRE

TADS stock a fleet of standby units for short or long term hire. We have various layouts and hardware configurations that we customise to suit your needs. The selected unit will be delivered and set-up on your site by one of our trained staff who will set cameras and motion detection to your preferred coverage and do a visual confirmation with you on the internal monitor. We will establish communications and perform a remote-in confirmation of camera and alarm viewing and management. Training and instructions for use can be completed in under 10 minutes.

SALES

TADS specialises in custom fit outs and design and we can tailor a solution to meet your specific requirements. Training and standard operating procedures are supplied with every unit along with a selection of fit out options, maintenance and warranty agreements.
